

SSN COLLEGE OF ENGINEERING, KALAVAKKAM
DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING
CS6413 - OPERATING SYSTEM LAB

Lab Exercise 2 Implementation of System calls

AIM:

To develop a C program to implement the cp, ls, grep commands using system calls.

cp command:

To copy a file into another

ls command:

To list all files in the directory

grep command:

To search the given pattern in the file

Procedure for cp:

1. The arguments should be obtained in command line and error messages should be printed if they are not sufficient.
2. Use open, read, write, creat, close system calls to do the following.
 mycp sourcefilename destinationfilename
 -copies source file to destination file
3. The failure messages for opening a file, creating a file should be intimated.

Note: mycp is the user programs implementing cp.

Procedure for ls:

1. To view the files in a directory include dirent.h that helps for opening, reading, closing a directory.
2. Open the user named directory giving specific path using opendir system call. This returns a [pointer to a DIR](#) data structure that represents a directory.
3. Can even use "." to represent the current working directory.
4. Traverse the directory entries using readdir system call. readdir () returns a [pointer to a dirent structure](#) whose member d_name contains the name of the current file.
5. Output the entries of directory.
6. Close the directory pointer

NOTE: Use open, read, write, creat, close, opendir, readdir, closedir system calls wherever necessary.

Procedure for grep:

1. Open the command line specified file using the required system call.
2. Read the contents iteratively till the end of the file and compare it with the pattern you are searching for.
3. If word found print the line on to the display.
4. Count the number of occurrences and display it finally.
5. Close the file descriptor.

NOTE: Use open, read, write, creat ,close system calls wherever necessary.

SAMPLE INPUT/OUTPUT:

cp:

Source.txt:

SSN COLLEGE OF ENGINEERING

Address.txt:

SSN NAGAR

KALAVAKKAM

`mycp source.txt target.txt`

FILE COPIED!

ls:

Enter the name of the directory (specify path name): ./lab

OUTPUT:

```
.  
..  
diros  
diros.zip  
Ex-3-cp-cat.doc  
Ex-3-cp-cat.pdf  
Ex-4-ls-grep.doc  
fork.pdf  
grep.doc  
prgs.doc  
sys-call prgs.doc
```

grep:

INPUT :

programname argument1 argument2

argument1: name of the file name to be opened

argument2: pattern to be searched in the argument 1

OUTPUT:

Display the contents of the file that has the pattern in it
